1.1. Compatibility Issue

1.1.1. User Interface

Problem

ContactProfile() is not backwards comp. with older versions of iOS

What does that mean?

When we release the app the customer will need to update the version of MR app in order to be able to set Notification Preferences.

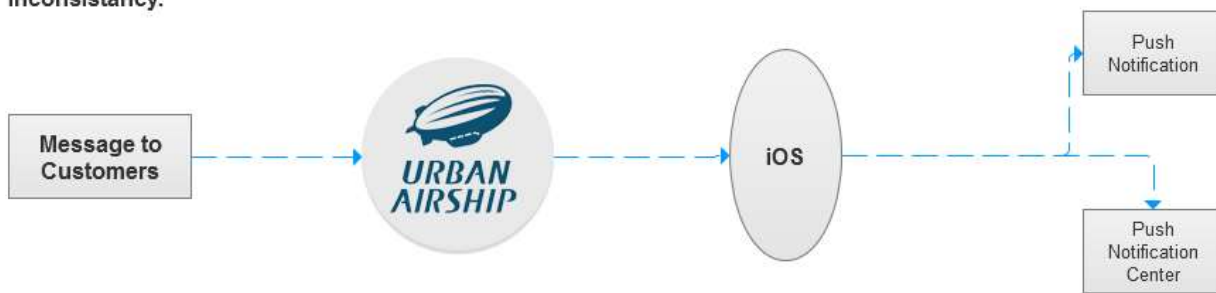

Expected behavior if they use the app without upgrading?

The Notifications toggle will appear to work, turning notifications on and off, but it will not actually trigger any actions.

- Potential to affect 58,000 iOS users of the My Resource App

Solution

Send a push notification to all iOS users prompting them to update thier version of the app to avoid potential feature failure/ inconsistency.
